

Holocron Capstone — Full Worked Solution (Facilitator Answer Key)

Facilitator-only — do not hand to participants. This folder is the complete worked Holocron capstone: a model artifact set a strong quad could produce in the Week-8 build. It ships in the **facilitator folder of every repo** (public + instructor) — the facilitator folder is the separation from student-facing content, not a withheld file.

What it is: one internally-consistent solution across the whole chain — PRD-light → TCD-light → TMD-light → SEP-light → DP-light → AI Spec — all scoped to the same **release-1 slice** and built on the same Azure stack and Holocron entities. Derived from `../holocron-reference-prd.md`.

How to use it: a comparison reference during Day 2–5 coaching and Friday review — **not** a grading key. A quad's solution will differ (different scope line, different trade-offs) and can still be excellent. Use this to check that their chain is *internally consistent* (does each AC have a sequence? does each SLO have monitoring? does the AI Spec trace back to the PRD?), not to match it line-for-line.

The release-1 scope slice (what this solution builds)

In: the core source-string lifecycle — access roles (CS1), product setup (CS2), create/edit/publish strings (CS3–4), version history + audit (CS5), search (CS6), delivery to consuming apps (CS7), request/complete review (CS11–12), and translation variants + lifecycle (CS15).

Out (defensible non-goals for release 1): aliases (CS9), advanced reviewer configuration (CS10), export/import exchange (CS16–18), rollback (CS8), AI-assisted translation, Figma integration, per-locale screenshot preview.

The artifacts

File	Artifact	Models
prd-light.md	PRD-light	The compressed requirements for the slice
tcd-light.md	TCD-light	Architecture stance, threat model, SLOs, trade-offs
tmd-light.md	TMD-light	Data model, Azure topology, API contract, sequences, monitoring
sep-light.md	SEP-light	Stakeholder map + one trade-off brief + one negotiated outcome
dp-light.md	DP-light	Outcome map, backlog, tracking, value stream, one experiment
ai-spec.md	AI Spec	The integrated, engineering-ready spec tying it all together
