

Monthly Outcome Review Template (DP §3)

Day 3 · Activity 3 handout. The monthly review answers one question: **is the feature winning?**
Customize this structure for your feature — and keep the "Decisions" section non-skippable.

The "What we learned" and "Decisions for next month" sections are what make the review **actionable** rather than ceremonial. Don't drop them.

Fill-in structure

```
## Monthly Outcome Review – <feature>

### The primary outcome
Baseline: <X>
Current: <Y>
Target by <date>: <Z>
Status: 🟢 / 🟡 / 🔴

### Supporting outcomes
[same table: baseline / current / target / status]

### Counter-outcomes (the guardrails)
[same table – confirm these stayed flat]

### What we learned this month
<2–3 bullets – what surprised us, what changed our model>

### Decisions for next month
<3–5 specific decisions: invest more / pivot / stop>
```

Companion: Quarterly NS roll-up

The quarterly review answers: **did the feature contribute to the NS?**

- Did the primary outcome move?
- Did the supporting outcomes contribute?
- Did counter-outcomes stay flat?
- Did the NS itself move? (Often hard to attribute to one feature — that's fine. Name what you can.)

What "good" looks like

- The monthly template has **decisions** as a non-skippable section.
- The quarterly roll-up explicitly **attributes (or de-attributes)** outcome movement.
- **Author + audience** are named — not "the team."

- Cadence is **calendar-anchored** ("first Tuesday of every month"), not "monthly-ish."
