

Output / Outcome / Leading-Indicator Triples (DP §3)

Day 3 · Activity 1 handout. The central tracking table: every meaningful output paired with the outcome it should produce and the earliest signal you'd watch.

For every meaningful output, the tracking plan has three columns. The **leading indicator** is the muscle — without it, the team waits 30 days to learn the outcome failed. With it, they know within a week whether the trend is right.

Fill in your triples

OUTPUT (WHAT SHIPPED)	OUTCOME (WHAT CHANGED FOR USERS / BUSINESS)	LEADING INDICATOR (THE EARLY SIGNAL)
		<leading indicator, measurable within 7 days>

Aim for **5–8 outputs** (not every story produces a distinct outcome). Several outputs may share an outcome — that's fine.

Worked sample — FieldPulse

OUTPUT	OUTCOME	LEADING INDICATOR
Reconcile mobile flow shipped	Median reconcile time 45→12 min in 30d	First-attempt completion ≥ 80% by week 2
Idempotent submission	Submission error rate < 0.1%	Duplicate-submit rate < 0.5% in week 1
Audit event publishing	SOC 2 audit passes Q3 review	Event volume + DLQ depth steady through week 4
Inline error states + recovery	Customer support tickets about reconcile drop 50%	Tickets per dispatcher per week declining starting week 3
WCAG AA conformance	Zero accessibility complaints in 90 days	axe-core scan pass rate 100% on every PR from week 1

What "good" looks like

- Each triple is **specific**, not "we'll watch some metrics."
- Leading indicators are **measurable within 7 days** of launch.
- Outcomes are **user-visible** (not an output dressed up).
- **Counter-metrics** are referenced (from your NS Defense Card).
