

FieldPulse — Product Overview | TPM Academy

FieldPulse — Product Overview

Day 1 ambient context for the Week 1 running case study. This one-pager is your shared starting point — enough to orient every triad on the same product before the activities begin. It intentionally does *not* diagnose problems or propose features; discovering those is your job across the week.

What FieldPulse is

FieldPulse is a mobile-first **field-service dispatch SaaS**. It helps service businesses schedule jobs, dispatch technicians, and keep the office and the field in sync throughout the day. Two applications make up the core product:

- **Dispatcher web app** — where the office schedules jobs, assigns and re-assigns technicians, and tracks the day as it unfolds.
- **Technician mobile app** — where field techs see their route, job details, and customer history, and report work as they complete it.

Who it's for

FieldPulse is sold to **HVAC, plumbing, and electrical shops** running roughly **50–200 technicians** — large enough to feel real scheduling pain, small enough to lack a custom-built internal platform. It competes with **ServiceTitan, Housecall Pro**, and the **in-house tools and spreadsheets** these shops often cobble together themselves.

The people who use it every day

Role	What they do with FieldPulse	Why they matter to us
Dispatcher	Builds the daily schedule, reacts to changes (call-outs, cancellations, emergencies), keeps promised arrival windows	The primary user of our squad's product surface

Role	What they do with FieldPulse	Why they matter to us
Technician	Follows the route, works the jobs, reports status from the field	Success depends on the mobile app working in real-world field conditions
Shop owner / ops lead	Watches the numbers, reports results, decides what to buy	Holds the budget and renews (or churns) the account

Where you sit

The academy's **TPM role** is on the **Dispatcher Workflow squad**, which owns the **dispatcher web app** and the **technician mobile app** end to end. When we talk about “our product” this week, that’s the surface we mean.

Business snapshot

Stage	Series B
Customers	~400 service businesses
ARR	~\$40M
Market position	Mid-market challenger to ServiceTitan / Housecall Pro
Our squad’s scope	Dispatcher web app + technician mobile app

What leadership is asking right now

Framed as open questions — not answers — to orient your week:

- Are dispatchers actually able to keep their promised arrival windows on a normal, messy day?
- Where does the handoff between the office and the field break down?
- What do dispatchers and technicians *do outside the product* to get their jobs done — and what does that tell us?
- Which of our numbers would a shop owner point to when deciding whether to renew?

You’ll spend Week 1 turning these open questions into evidence-backed personas, pain points, and a defensible problem statement. Start here; let the interviews, tickets, and data you’re given over the week sharpen the picture.
