

Day 4 — Identifying Pain Points · Facilitator Guide

Companion to `labs/day-04-pain-points.md`. Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Materials note

- Each quad gets a **shuffled subset** of the Pain Extraction Packet — no two quads should have the same full subset. This is what sets up cross-quad learning in Activity 4.

Activity 1 — Extract From the Packet

Cues:

- Walk the room watching for noun-based pains ("UX", "training"). Push quads to rewrite as verb + circumstance + consequence on the spot.
- Workaround mentions in the ride-along notes are gold. If quads skip them, point at the specific line.

Activity 2 — Dig, Sort, Promote

Cues:

- Call the room silent for the Step 2 silent-sort block and hold it.
- If a quad finishes silent-sort fast, they probably skipped disagreement. Walk over and ask: "Were there any placements someone else moved? Good ones to revisit."
- The 5 Whys often stop at L3 because the answer is "we don't know." That's a finding — note it as an interview target.

Activity 3 — Score Your Map

Cues:

- The discomfort around "must live with" is real. Honor it — don't paper over it with optimism.
- A matrix with everything in the "Must fix" quadrant means severity and frequency were not discriminated. Push for honest scoring.

Activity 4 — Cross-Quad Challenge

Cues:

- Watch for quads that don't revise after critique — usually means they didn't hear it. Re-anchor: "What's one thing the other quad surfaced that you hadn't seen?"
- The "if we solved this, everything else is easier" pain is often the second-ranked one. That's a useful surprise to call out in readouts.
