

Day 5 — Data-Driven Problem Framing · Facilitator Guide

Companion to `labs/day-05-problem-framing.md` .
Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Activity 1 — Draft Your Statement

Cues:

- The "Success looks like" line is the most-skipped. Walk the room and refuse to let it stay empty.
- If a quad has two candidate statements after the parallel draft, ask which one the engineer would prefer to scope from. That usually picks the winner.

Reference exemplar (facilitator-only — do NOT hand out; share only *after* quads have drafted their own, so it doesn't anchor them):

A strong Day-5 problem statement, if a quad ran the FieldPulse case through the template:

Problem statement – End-of-day reconcile tax

****Who**** – Lead dispatcher at a 50–200–tech HVAC shop, running the board solo on weekdays.

****Currently**** – Stays ~45 min past shift end every night hand-reconciling paper tickets, truck stock, and timecards before submitting the day (6 of 8 ride-alongs).

****Which causes**** – The branch's most experienced person loses ~3.75 hrs/week, and mismatches that slip through become payroll errors and understocked trucks.

****Because**** – The three sources of truth don't reconcile automatically, and the inventory view is 3 clicks deep – so dispatchers keep parallel paper records.

****We know this because**** – ride-along notes [Observed]; "mid-day re-routes are my worst hour" 7/10 interviews [Reported]; reconcile funnel 65% abandonment at step 4 [Observed]; support tickets T-01/T-03 [Reported].

****Success looks like**** – median nightly close time drops from ~45 min to under 10 min within 30 days of rollout.

Why it clears the bar: named customer + context, a verb-based "Currently" with frequency, a *measurable* consequence, a root cause (not a solution), every claim evidence-tagged, and a quantified + time-bound success target. Use it to calibrate scoring, and as the shape to coach weak statements toward.

Activity 2 — Pressure Test

Cues:

- If a quad has AI rewrite the statement, ask them to point at the line they wrote. Re-anchor ownership.
- A long Open questions list is a feature, not a bug. Honor the quads that grew their list honestly.

Activity 3 — Paired Dry-Run

Cues:

- The "what I heard" sentence is the single most diagnostic moment. Slow it down — don't let the listener gloss it.

- If both directions run long, cut the joint debrief to 10 minutes rather than skipping the second readout.

Week 1 Cohort Readouts

Facilitator timing:

- 6 quads = ~80 min readouts + 18 min between = **~98 min**. Budget 90 min and stay disciplined.
- Random draw order (pull quad names from a hat or randomizer).
- If running short, compress Q&A to 2 minutes — never the readout itself.

Facilitator debrief (end of Friday, instructor only)

Before you log off:

1. Which quads seem **PRD-ready** for Week 3? Which need extra coaching during Week 2?
2. Who was over-relying on AI by the end of the week vs. using it judiciously?
3. Which quad surprised you — in either direction — and why?
4. Three adjustments for Week 2 pacing based on what you saw today.
