

Day 4 — Using AI for Strategy & Research Summaries · Facilitator Guide

Companion to `labs/day-04-ai-research-summaries.md`.
Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Activity 1 — Multi-source Synthesis Drill

Cues:

- The single most common failure is **theme inflation** — the AI lumps three different complaints under one bland theme ("usability"). Push quads to demand granularity.
- Watch for invented citations. Make at least one quad surface a hallucinated ticket number to the room.

Activity 2 — The Research Pack Pass

Cues:

- Surface in the room: "How many themes did your quad cut?" Quads who cut nothing didn't actually verify.
- If a quad has 8 themes, the AI lumped at the wrong axis. Push for one re-split, then a re-cull.

Activity 3 — Competitive Snapshot

Cues:

- Walk the room. If any quad asks AI "what is the market size" — pause and use it as a teaching moment for the whole cohort.
- The "what's missing" prompt is the highest-leverage one of the day. Make sure every quad actually runs it.

Activity 4 — Brief Assembly + Provenance Log

Cues:

- Pin all briefs in the shared space. Tomorrow's journey-mapping references them directly.
- If a brief has no "where AI was wrong" entries, the quad didn't validate. Push them to revisit at least one theme.

Facilitator reflection prompts (end of day)

- Which quad over-trusted the AI? They'll need a stricter validation cue tomorrow.
- Which quad under-used AI? Explore why — sometimes the cause is a tool-access gap, not a philosophical objection.
- Did anyone fabricate a competitor stat unintentionally? That's the highest-cost mistake from Day 4 — surface it openly Friday morning to inoculate the cohort.
