

Day 5 — Mapping Customer Journeys to Product Features · Facilitator Guide

Companion to `labs/day-05-journey-mapping.md`.
Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Activity 1 — Anchor the Journey

Cues:

- If a quad picks "all journeys" — push back. One persona, one scope, today.
- If a quad's stages are feature names ("Login → Reconcile → Logout") — redirect to user-task names ("Arrive at office → Take the day's dispatch → Reconcile").

Activity 2 — Fill the Lanes

Cues:

- A flat emotions curve means the quad sanitized. Re-anchor on real interview quotes.
- If a quad has friction stars on every stage, push them to differentiate by severity. Everything-is-friction = nothing-is-friction.

Activity 3 — From Friction to Features

Cues:

- A feature with no metric link is the cohort's most common error. Force the link.
- If a quad's 3 features all address the same stage, push them: "Is this stage really 80% of the friction?"
- The "Trade-off / risk" box is non-negotiable. Saying "no downside" is a failed answer.

Activity 4 — Friday Readouts (Full Week-2 Package)

Cues:

- Hold the clock. Quads that blow their time get scored down on coherence — it is a real signal.
- If a quad has one designated "speaker," interrupt and reassign. All three voices is non-negotiable.

Facilitator reflection prompts (end of week)

- Which quad's package would survive an actual stakeholder review unedited? They should be a Week-3 example.
- Which quad's package has the weakest causal chain (NS ↔ signals ↔ features)? They get coached first Monday.
- Did the cohort meaningfully improve at AI use between Day 4 and the readouts? If not, examine your validation push — it may need to be louder Week 3.
- The journey map non-product touchpoints — did they make it into any quad's map? Surface this Monday as the bridge to Week 4.
