

FieldPulse Research Pack

Day 4 · Activities 2–3 handout (index). The real, noisy secondary-research corpus your quad synthesizes into the Strategy Brief. Six files — five content documents plus this index — deliberately redundant, partly contradictory, and un-scored. That noise is the point — your job is to extract signal and cite it.

What's in the pack

#	Document	File	Use in
1	3 dispatcher interview transcripts	fieldpulse-research-pack-interviews.md	Activity 2 (pain themes)
2	14 support tickets	fieldpulse-research-pack-support-tickets.md	Activity 2 (pain themes)
3	Industry analyst report	fieldpulse-research-pack-analyst-report.md	Activity 2 & 3
4	2 competitor product-tour notes	fieldpulse-research-pack-competitor-tours.md	Activity 3 (competitive snapshot)
5	Voice-of-customer Slack export	fieldpulse-research-pack-voc-slack.md	Activity 2 (pain themes)

How to cite

When you tag evidence in the Strategy Brief, name the document and the locator so any citation can be checked against source:

- Interviews → interviewee + quote ID (e.g., "Interview — Maria R., A3")
- Tickets → ticket ID (e.g., "Ticket T-03")

- Analyst report → section heading
- Competitor tours → competitor + timestamp
- Slack → channel + date (e.g., "#voice-of-customer, 2025-09-12")

Evidence tiers (used course-wide)

Observed > Reported > Inferred > AI-generated.

- **Observed** — a researcher watched it happen (ride-along notes, screen recordings).
- **Reported** — someone said it (interview quotes, ticket text, Slack messages).
- **Inferred** — a reasonable conclusion drawn across sources, not stated outright.
- **AI-generated** — produced by the model; unverified until you check it against a higher tier.

All materials are sanitized and anonymized: customer and shop names removed, shop sizes preserved within a band, identifying details changed. Reported frequencies are the customer's words, not measurements. Nothing here is analyzed for you.
