

Metrics Tier Sheet

Day 1 · Activity 4 handout. Your quad's living map of the three metric tiers for its FieldPulse problem — a North Star placeholder on top, KPIs in the middle, operational signals on the bottom, connected by a believable causal chain.

Fill one row per tier. A well-formed sheet reads bottom-up: a change in an operational signal plausibly ripples up to a KPI, which ripples up to the North Star.

Tier	Definition	How many	Purpose
North Star (NS)	The single metric that, if it goes up, the customer is winning <i>and</i> the business is winning	1 (placeholder on Day 1)	Replaced Day 2
KPI	Business-level outcome the NS rolls up to, or that signals NS health	2–3	Quarterly board view
Operational signal	Daily/hourly leading indicator a team can act on	4–6	What the squad watches in standups

Your Tier Sheet

Quad: _____ Problem area: _____

North Star (placeholder)

We are winning when **[customer outcome]** increases for **[user segment]**, measured by **[single number]**.

KPIs (2–3)

Each KPI should pass all four checks: spoken in business terms · a senior leader cares without translation · imaginable as one weekly chart · you can name what "good" is without inventing a number.

#	KPI	Operational signals that ladder into it
1		
2		
3		

Operational signals (4–6)

Mark instrumentation gaps (data that does not exist yet) in **red**.

#	What it measures	Data source	How fast it moves	Action if it drops 30%	Gap?
1					
2					
3					
4					
5					
6					

Known weaknesses

Capture the single strongest challenge your Tier Sheet took in the pair-defense round:
