

Week-2 Readout Scoring Rubric

Day 5 · Activity 4 handout. The live rubric peers and the instructor use to score each quad's 12-minute integrated strategy package. Use it to score others — and to pressure-test your own package before you present.

Score each dimension against the "exemplary" bar. Weighted total out of 100.

Dimension	Weight	What "exemplary" looks like	Score
Metric coherence	25%	NS, KPIs, and op-signals form a believable causal chain	
North Star defense	20%	Quad can name + rebut the three pitfalls applied to <i>their own</i> NS	
Journey realism	20%	Map references observed Week-1 pain points; non-product touchpoints present	
Feature linkage	15%	Each top feature ties to journey friction AND a Tier Sheet metric	
AI-use transparency	10%	Where AI summarized research, prompts and validation steps are disclosed	
Design awareness	10%	At least one UX principle named with its trade-off acknowledged	

Weighted total: _____ / 100

What to present (in order, 12 min)

1. North Star + counter-metric (1 min)

2. **Tier Sheet causal chain** (2 min) — three sentences
3. **One design principle in detail** (2 min) — the one you expect the most pushback on
4. **Journey map walk-through** (4 min) — narrate the persona's journey, friction stars
5. **3 feature concepts** (3 min) — each with stage, friction, metric, principle

Then 3 min Q&A.

Rules that affect your score

- **Hold the clock.** Quads that blow their time get scored down on coherence — it's a real signal.
- **All three voices present.** A single designated speaker is not allowed.
- Predict the toughest peer challenge in advance and be ready for it.
