

Day 1 — Drafting Technical PRDs from Customer Requirements · Facilitator Guide

Companion to `labs/day-01-drafting-prds.md` . Facilitator-only — do not hand to participants.

Activity 1 — Pick the One Feature

Cues:

- If a quad tries to merge two features, push back — the discipline of choosing is the work.
- Memos that read like marketing copy signal generic framing; coach toward user-specific language.

Activity 2 — Section 1 (Context) and Section 2 (Problem)

Cues:

- Watch for Section 1 drafts that restate company strategy from scratch; redirect to the customer signal.
- If a quad skips solo drafting, the combined prose loses specificity — keep them on the protocol.

Activity 3 — Section 3 (Goals & Non-goals) and Section 4 (Scope)

Cues:

- If a quad's goals are feature names ("Ship X"), redirect to user outcomes.
- If non-goals is empty, ask: "What's the most ambitious thing a stakeholder might think this includes?" Put that in non-goals.

- If scope's "Out" column is empty, ask: "What's the version-2 of this feature?" Put it in Out.

Activity 4 — Section 5 (Solution Sketch)

Cues:

- Most over-specifications come from PMs who used to be engineers. Coach them to leave room for engineering judgment.
- If the three-questions test produces only implementation questions, the Section 5 has over-specified; pull back.

Facilitator reflection prompts (end of day)

- Which quad picked a feature with the weakest metric link? Coach them tomorrow before AC drafting.
- Which Section 2 quotes the customer's actual words? Hold up as a positive example.
- Did anyone over-specify Section 5 (e.g., propose a database)? That's the most common failure mode — surface tomorrow morning.
- Anyone using AI? Course-correct directly and privately.
