

Day 5 — PRD Review (Morning Reviews, Afternoon Revisions + Secondary) · Facilitator Guide

Companion to `labs/day-05-prd-review.md` . Facilitator-only — do not hand to participants.

Pre-flight

- Post the review pairings at 09:00 (see the pairing structure in the student packet — two AM primary reviewers + one PM secondary reviewer per PRD; example matrix for 6 quads A–F is in the student file).
- Have the rubric ready to explain in the opening. Restate the scoring thresholds: 3.0+ ships as-is; 2.0–2.9 ships with named gaps; below 2.0 you intervene before close.

Activity 1 — Primary Review (Morning)

Cues:

- Catch reviewers writing "this could be more specific" — push them to write the specific version themselves.
- Coach against scoring the *idea* instead of the *PRD*. Even a weak idea can have a strong PRD; even a strong idea can have a weak PRD.
- Some reviewers will be too generous on first pass. Calibrate by sharing the rubric definition mid-block.

Activity 2 — Author Response + Clarifying Conversation

Facilitator role: Sit in on at least one conversation. Watch for:

- Authors getting defensive — coach toward curiosity.
- Reviewers softening at the table — call out: "What did you write down? Stand by it or revise."

- Conversations that drift to "the *idea*" instead of "the *PRD*" — redirect.

Activity 3 — Revisions

Cues:

- Don't let quads spend 60 minutes polishing prose. Coherence fixes first; sentence-level fixes last.
- Push-backs without reasoning are score-defense; force the rationale to land in the log.

Activity 4 — Secondary Review

Cues:

- Watch for secondary reviewers who skip the honesty check on the resolution log; that's the point of the round.
- Verdicts below 2.0 require facilitator intervention before close — do not let them slip past wrap.

Facilitator wrap (15 min, end of day)

- Read aloud one strength of each quad's PRD (named publicly).
- Surface the **most common review finding** across the cohort (this is the cohort's growth edge for Week 4).
- Preview Week 4: the PRDs become input to the **technical architecture** conversation. NFRs become first-draft architectural constraints.

Facilitator reflection prompts (end of week)

- Which quad's PRD shipped highest? They are the positive example for Week 4 PRDs.
- Which quad's review *quality* (not their PRD) was strongest? Hold up — review skill is a TPM superpower.
- Did any author quad respond defensively? Coach individually before Week 4.

- Did the cohort find the non-AI discipline harder or easier than expected? Tap that next week — Week 4 reintroduces AI for technical-architecture work.
