

Four-Dimension Scoring Sheet

Day 1 · Activity 1 handout. Score each of your three Week-2 feature cards on four dimensions (1–5 each). Highest total is the default pick; if scores tie, your quad must argue it out. Fillable — one row per feature.

The four dimensions (1 = low, 5 = high)

Dimension	Question you're scoring
Friction severity	How big is the pain it addresses?
Metric movability	How confident are we it'll move the metric within 30 days?
Build feasibility	How achievable in one quarter?
Learning value	What do we learn even if it doesn't ship?

Scoring grid

Feature	Friction severity	Metric movability	Build feasibility	Learning value	Total (/20)
A —					
B —					
C —					

Tie-break notes (if two totals are within 1 point)

Write the argument here — which feature wins on a dimension that matters most, and why:

Feature ____ over Feature ____ because

Locked pick

We are PRDing: _____

Total score: _____ / 20

Carry this pick into the "Why this one" memo.
