

Day 5 — Performance Baselines, Monitoring & Validating AI-Generated Data Summaries · Facilitator Guide

Companion to `labs/day-05-perf-monitoring-ai-validation.md` . Facilitator-only — do not hand to participants.

Activity 1 — Performance Baselines

Cues:

- "We don't know" without a named assumption isn't a baseline; coach toward an estimate plus rationale.
- Verify-at dates that read "TBD" never get audited; force a concrete day.

Activity 2 — The Monitoring Plan

Cues:

- Alerts without a runbook step are noise that gets muted. Force the on-call action.
- Operator dashboards over 6 charts go unread. Coach toward ruthless prioritization.

Activity 3 — AI-Summary Validation Log

Cues:

- Pending entries without dates become permanent. Force a deadline before close.
- Quads that skip the inventory and only log what they remember missed something; push to enumerate from the Pattern Library.

Activity 4 — TMD Integration + Cross-Review + Sign-Off

Cues:

- "Approved" without an honest gap list inflates confidence; coach the rubric as the floor.
- Reviewers who score generously need a calibration check against the rubric mid-block.

End-of-week facilitator wrap (15 min, end of week)

- Read aloud one section per quad that the cohort should learn from.
- Surface the **most common AI-validation gap** — coach the cohort to notice it next time.
- Preview Week 6: the **stakeholder sign-off matrix** from TCD Section 6 becomes the negotiation list. Each quad picks 1–2 constraints to actively negotiate.

End-of-week reflection prompts

- Which quad's TMD reads like an engineer could pick it up and start coding? They are the Week-6 positive example.
- Which quad's AI-validation log is most rigorous? Hold up — this discipline is the differentiator.
- Did anyone over-engineer the monitoring plan with 20 alerts? Coach back to <5.
- Did the cohort use AI as critic or as oracle this week? Strong indicator for Week 6 negotiation prep.
