

Engagement Triage Pack — 8

Stakeholder Profile Cards

Day 2 · Activity 1 handout. One set of eight cards per quad (print A5, or run digital). For each card, your quad places the stakeholder on the Power × Interest grid, then picks a **cadence, format, and length**. Two of these are traps — the "obvious" quadrant is wrong. Argue before you converge.

Each card has a **Public surface** (everyone reads) and a **Hidden context** (the wrinkle that changes the answer — reveal it only when your quad has committed to a first placement, or let the facilitator turn it over). Grounded in the FieldPulse world where noted.

Card 1 — Dana K., CFO (Series C peer company)

Public surface

- CFO of a 300-person SaaS company
- Cares about cost forecasts and ROI, not implementation detail
- Asks "what does this cost and what do we get?"

Hidden context

- Reads exactly one number and one sentence. A 6-slide deck gets skimmed to the summary line.
- Will escalate hard — and publicly — if a cost projection changes and she wasn't warned first.

Triage: cadence ____ · format ____ · length ____

Card 2 — Marcus T., Lead engineer on a partner team

Public surface

- Owns the **inventory-service API** that FieldPulse Reconcile depends on
- Slack-first; hates meetings; replies in minutes if you're in his channel
- High interest when his API is in the blast radius, indifferent otherwise

Hidden context

- If you book a 30-min sync he'll accept and then answer email during it. If you post a tight thread with a specific ask, you get a real answer same day.
- His backlog is full; "add a story for us" needs a *why-now* he can defend to his own lead.

Triage: cadence ____ · format ____ · length ____

Card 3 — Priya S., Customer Success Manager, at-risk top-10 account

Public surface

- CSM for a 180-tech HVAC customer on FieldPulse
- Her customer is asking about Reconcile **weekly**
- Needs talking points she can forward without editing

Hidden context

- Looks low-power (a single CSM) but is **high-power by proxy** — the account is a renewal risk, and her escalation reaches the Ops VP and GM the same day.
- The trap: quads park her in "low power / high interest" and under-serve her. The renewal makes her a manage-closely stakeholder.

Triage: cadence ____ · format ____ · length ____

Card 4 — Renée A., VP of Operations (FieldPulse)

Public surface

- Ops VP; owns dispatcher training rollout across ~400 customers
- 17 direct reports; her calendar is brutal

- Fears the **training load** a Reconcile change imposes on the field

Hidden context

- She **veto**es things she's surprised by — not things she disagrees with. Surprise is the trigger, not the substance.
- Calibrates to high-power / *medium*-interest: a monthly written brief plus a standing trigger — "if training hours per customer exceed X, she gets a heads-up before the number is public."

Triage: cadence ____ · format ____ · length ____

Card 5 — Omar F., Junior PM on an adjacent squad

Public surface

- PM on the Scheduling squad; two quarters into the role
- High interest — he's using your Reconcile approach as a **blueprint** for his own feature
- Low power — no authority over your work

Hidden context

- The value here is **bidirectional**: he'll surface edge cases from his own users you haven't seen, if you keep him in the loop.
- The trap: quads treat him as pure "keep informed" broadcast and miss that he's a two-way source. A group thread plus an occasional 1:1 beats a one-way digest.

Triage: cadence ____ · format ____ · length ____

Card 6 — Ingrid V., Senior security architect

Public surface

- Reviews Reconcile for security + compliance **every six weeks**
- Expects a **written brief** ahead of each review; will not review verbally
- High power at review gates, low interest between them

Hidden context

- A crisp pre-read a few days early buys you a fast review. A cold, in-meeting walkthrough buys you a deferral.
- She files what she signs off with a regulator, so "described it in Slack" is not evidence — she needs it in writing.

Triage: cadence ____ · format ____ · length ____

Card 7 — Trey W., Staff engineer in your own squad

Public surface

- Staff engineer on the Reconcile squad — your team
- In your **daily standup**; weekly 1:1
- Needs full technical detail; is building the thing

Hidden context

- The engagement question isn't cadence (that's set by standup + 1:1) — it's **format and depth**. He wants the trade-off *rationale*, not just the decision.
- The trap: quads over-formalize internal engagement. He doesn't need a 1-page brief; he needs a Slack thread and a whiteboard.

Triage: cadence ____ · format ____ · length ____

Card 8 — outside counsel for a customer's regulator

Public surface

- External lawyer representing a regulated FieldPulse customer
- Submits a **quarterly request** for compliance evidence
- Expects **formal documentation**; no interest in product roadmap

Hidden context

- Everything is on the record. Casual phrasing ("we think it's fine") becomes a liability; precise, dated, sourced documentation is the only acceptable format.
- Lowest cadence, highest formality on the whole pack — quarterly, written, exact.

Triage: cadence ____ · format ____ · length ____

Quad worksheet

#	Stakeholder	Quadrant	Cadence	Format	Length
1	CFO (Dana)				
2	Partner eng (Marcus)				
3	CSM at-risk (Priya)				
4	Ops VP (Renée)				
5	Junior PM (Omar)				
6	Security architect (Ingrid)				
7	Staff eng (Trey)				
8	Outside counsel				

The two cards we disagreed on most: ____ and ____ —
because _____.
