

Day 5 — Negotiating Priorities & Roadmaps (Live Simulations)

Activity packet for participant quads. Today's job: run **three rounds of simulated negotiation**, capture outcomes, and ship the SEP — the fourth and final sibling artifact alongside PRD / TCD / TMD.

Where we are in the week

Sections 1–4 of the SEP are ready. Today is the live exercise: three rounds of simulated negotiation, with quads playing each other's stakeholders. By 16:00, every quad has logged outcomes, written the Section 5 outcomes log, and shipped the SEP.

Today's cadence

Clock	Block	What happens
09:00 – 09:15	Opening; sim pairings posted; rubric reminder	Pair quad A with quad B (and so on); each quad plays "stakeholder" for one of their counterpart's negotiations
09:15 – 10:45	Round 1 — Architecture / SLO negotiation	First quad negotiates one TCD Section 4 SLO or Section 5 trade-off
10:45 – 11:00	Break	
11:00 – 12:00	Round 1 debrief + Round 2 prep	Capture outcomes; swap setups
12:00 – 13:00	Lunch	
13:00 – 14:30	Round 2 — Scope negotiation	Negotiate a non-goal challenge or scope-creep ask
14:30 – 14:45	Break	
14:45 – 15:45	Round 3 — Resource / timeline negotiation	Cross-team dependency or roadmap ask
15:45 – 16:00	Wrap + sign-off	SEP Section 5 outcomes log finalized

The three rounds — what each is for

Round 1: Architecture / SLO

Quad A is the author; quad B plays a high-power technical stakeholder (architect, security lead, eng director).

The author quad pitches the trade-off they wrote up Day 3. The stakeholder quad pushes back using the objection map from Day 4 — and improvises further objections.

Round 2: Scope

Quad B is the author; quad A plays a non-technical stakeholder (PM director, customer success lead, sales VP).

The author quad defends their PRD scope. The stakeholder quad challenges with a scope-creep ask: "we need this feature to also do X" or "we need this earlier."

Round 3: Resource / timeline

Quads pair freshly. **One quad plays an executive** (CFO, GM); the other negotiates a resource or timeline change.

Specifically: an executive demands the feature ship 30% sooner, OR cuts the team by one engineer, OR demands a feature added without scope cuts. The author negotiates against impossible asks.

The negotiation rubric (live scoring)

Each quad scores both sides of each round on:

Dimension	Weight	Exemplary
Listened first	20%	Restated the stakeholder's concern before responding
Translated tech to business	20%	No unexplained jargon; framed cost in business terms
Held the line where it mattered	15%	Did not surrender constraints under social pressure without rationale
Found the trade space	20%	Surfaced what could move (scope, time, quality, resources)
Captured the outcome	15%	Specific, written, with owner + next step
Body / pacing / closure	10%	Conversation reached a decision (or explicit deferral)

Each round runs ~30 minutes:

- **5 min** prep (re-read packet)
 - **15 min** live negotiation
 - **10 min** debrief + capture
-

The outcomes log template (SEP Section 5)

For each round, capture:

```
### Round N: <topic>
**Quad A (author):** <names> | **Quad B
(stakeholder):** <names>
**Stakeholder role played:** <e.g., Architect>

**The ask:**
<What the author quad asked for>

**Stakeholder's response:**
<What the stakeholder pushed back with – top 1-2
objections>

**The trade space surfaced:**
<What the author offered to move; what they held>

**Agreement:**
<What was agreed, or "deferred to <date>" or
"disagreed; escalation
to <person>">

**Owner + next step:**
<Who does what, by when>

**What we learned:**
<One sentence – the muscle this round built>

**Score:**
- Author: total /4.0
- Stakeholder: total /4.0
```

Round 1 — Architecture / SLO Negotiation

Format: Quad pairs • **90 min total** (5 prep + 15 negotiate + 10 debrief, repeated to swap)

The setup

Each author quad has the 1-page brief from Day 3 + the objection map from Day 4. The stakeholder quad plays a high-power technical role (architect, security lead, or eng director) and has the brief and the objection map (so they know what's coming),

plus a **surprise-objection card** from `week-`

`06/handouts/surprise-objection-set.md` — objections **not** in the author's prep, to push past their rehearsed answers.

The **public surface** of each surprise-objection card (the stakeholder type and role) is visible to both quads. The card's roleplayer-only content is for the stakeholder quad; the author quad does not see it before the round — that's the point.

Quad protocol (per round)

1. **Author quad opens** (60 sec) — using their rehearsed opening from Day 4.
2. **Stakeholder quad responds** with their first objection. Author responds.
3. **Stakeholder quad escalates** with the surprise objection. Author improvises.
4. **The conversation runs 12–15 minutes total**, including pivots, restatements, attempts to find trade space.
5. **Both sides try to close** with a specific outcome — agreement, deferral, or escalation path.

Debrief (10 min)

- What was the highest-leverage moment?
- What did the author quad *not* hear from the stakeholder?
- What language did the author quad use that should be retired?
- Score both sides on the rubric.

Roles swap; repeat.

Round 2 — Scope Negotiation

Format: Same setup; new pairing **or** same pair with role swap;
90 min

The setup

The non-technical stakeholder quad arrives with a **scope-creep ask** from the scope-creep ask cards (`week-06/handouts/scope-creep-ask-cards.md`). Examples of the kind of ask:

- **PM Director:** "Marketing wants us to add a manager-view dashboard before launch. It's a small ask but they're

committed to a campaign."

- **Customer Success Lead:** "Our top-3 customer just asked for tablet support. They've made it a renewal condition."
- **Sales VP:** "We have a deal in flight that requires this feature to support multi-shop manager view. Help us make the deal."

The **public surface** (the stakeholder role and the ask) is visible to both quads. Any roleplayer-only content on the card is for the stakeholder quad only.

The author quad's challenge

Defend the **non-goals** in PRD Section 3 and the **out-of-scope follow-ups** in PRD Section 11. Honestly evaluate whether to:

- Hold the line (and capture the no with reasoning)
- Cut existing scope to add the new ask
- Offer a phased plan
- Escalate (because the stakeholder has authority you'd defer to)

The trade space (key concept introduced)

Negotiation surfaces when **at least one of these can move**:

- **Scope** (what's in)
- **Time** (when it ships)
- **Quality** (what level of polish)
- **Resources** (who's working on it)

If nothing can move, you're not negotiating — you're saying yes or no. A skilled TPM identifies which axis the stakeholder cares most about, and offers movement on a different axis.

Debrief (10 min)

- Which axis did the stakeholder push? Which did the author offer?
- Did the author hold any non-goal? Which one?
- What "yes-but" was offered?

Round 3 — Resource / Timeline Negotiation

Format: Fresh pairing; one quad plays executive; **60 min**

The setup (the hard one)

The executive arrives with one of the demands from the executive-demand scenario cards (`week-06/handouts/executive-demand-scenario-cards.md`):

1. **"Ship 30% sooner."** No scope cut offered. The author negotiates on the trade space.
2. **"You've lost an engineer to a higher priority. Same scope, same date."** Same exercise from a different angle.
3. **"We need [adjacent feature] added. Same date, same team."** Scope expansion against constraints.

The **public surface** (the executive role and the demand) is visible to both quads. What's really driving the executive and where they'll settle is roleplayer-only content on the card — the author's job is to find it.

What "good" looks like

The author quad surfaces all four trade-space axes and offers movement on at least two, while protecting their non-negotiables.

The stakeholder quad pushes hard but **agrees somewhere**, even if it's "deferred to next QBR."

Debrief (10 min)

- Which axes did the author offer? Which did the stakeholder accept?
- Did anyone fold a non-negotiable? Why?
- What's the "owner + next step"? (Force this — don't let the round end without it.)

SEP Section 5 — The Outcomes Log

By 15:45, every quad has Section 5 with three round entries. The polish:

- All three rounds documented in the template
 - Owner + next step for each (no "TBD")
 - Specific score totals
 - One sentence per round on **what the team learned**
-

End-of-week (Week 6) checkpoint

Each quad ships:

- ✓ **Full SEP** with Sections 1–5
- ✓ Section 1 Stakeholder map (Power × Interest + RACI + watch list)
- ✓ Section 2 Engagement plan
- ✓ Section 3 1-page trade-off brief
- ✓ Section 4 Meeting prep + objection map
- ✓ Section 5 **Three negotiation outcome logs**, with owners and next steps
- ✓ AI provenance log entries from Days 4–5

The SEP joins the PRD / TCD / TMD as the fourth sibling artifact. Together they are the input to Week 7's delivery work.
