

Day 5 — Identifying & Removing Delivery Bottlenecks · Facilitator Guide

Companion to `labs/day-05-bottlenecks.md` . Facilitator-only — do not hand to participants.

Activity 1 — Design 3 Experiments

Cues:

- If a quad's "test" is too vague (e.g., "we'll improve the process"), force them to name the specific change.
- If the success criterion lacks a baseline, ask: "how will you know it improved?"
- If the duration is < 2 sprints, push back — most experiments need 4–8 weeks of data.

Facilitator wrap (15 min, end of week)

- Read aloud one experiment from each quad.
- Surface the **most common bottleneck pattern** across the cohort — usually code review or sprint-planning queue.
- Preview Week 8: hand out the Holocron problem brief + AI Spec Development.

End-of-week reflection prompts

- Which quad's experiments are most actionable? They are the Week-8 positive example.
- Which quad has the strongest integrated artifact set? Hold up Friday Week 8.
- Did anyone treat experiments as ceremony rather than tests? Coach in Week 8.

- Did every quad read the Holocron brief and reach a one-sentence problem statement? Weak reads on Friday become weak PRDs on Tuesday.
