

Day 1 — Product Delivery

Outcomes + Agile Manifesto & Principles

Activity packet for participant quads. Today's job: name the **outcomes** the feature is meant to produce (not the outputs), and use the **Agile Manifesto values** as a decision-making aid for real product trade-offs.

Where we are in the week

The week opens by separating the muscle of **delivery** from the muscle of **outputs**. Most teams ship work; few teams clearly ship outcomes. Today builds the outcome map (DP Section 1), and uses the Agile Manifesto as the decision-frame underneath it.

Inputs

- The full sibling artifact set: PRD / TCD / TMD / SEP
 - The quad's NS Defense Card and Tier Sheet (Week 2)
 - The negotiated outcomes log from SEP Section 5 (Week 6 Day 5)
-

Output vs outcome — the foundational distinction

Output	Outcome
What we built or shipped	What changed for the user / business
"Reconcile flow shipped on July 15"	"Dispatchers spend 30 min less per shift on reconciliation"
Easy to measure	Harder to measure
Can be hit while losing	If hit, you actually won

Most product teams confuse the two. They say "the outcome is shipping the feature." That's an output dressed in outcome's clothes.

The discipline:

- Every output ought to map to **one or more outcomes**
- Every outcome ought to have **at least one leading indicator** (Day 3)
- The team can **hit all outputs and miss all outcomes** — that's the most common shipping-but-failing pattern

The Agile Manifesto — values, not ceremony

The Manifesto:

Individuals and interactions over processes and tools
Working software over comprehensive documentation
Customer collaboration over contract negotiation
Responding to change over following a plan

That is, while there is value in the items on the right, we value the items on the left more.

What the Manifesto doesn't say

- "No documentation" — the PRD/TCD/TMD/SEP/DP are valuable; they support working software
- "No plans" — plans are essential; rigid adherence to plans isn't
- "No process" — processes serve people; people don't serve processes
- "Stand-ups daily" — the Manifesto says nothing about meetings

The Manifesto is a **prioritization aid for trade-offs**, not a checklist.

The 12 Principles (today's reference)

The 12 Principles deepen the four values. We highlight 6 most relevant for TPM work:

1. **Satisfy the customer through early and continuous delivery** — small, frequent shipments beat one big

launch.

2. **Welcome changing requirements, even late** — change is information, not failure.
3. **Deliver working software frequently** — weeks, not months.
4. **Business and developers must work together daily** — the TPM is the bridge.
5. **Continuous attention to technical excellence and good design** — speed without quality is cowardice.
6. **Self-organizing teams produce the best results** — top-down task assignment is a smell.

The 6 we de-emphasize aren't wrong; they're harder for a junior TPM to drive directly.

Activity 1 — Output / Outcome Sort

Format: Quad • 35 min • Block 1

Purpose

Calibrate the output/outcome distinction with examples before applying it to the quad's feature.

The sort pack — 12 statements

For each, the quad labels: Output / Outcome / Both (a thing stated as both) / Neither.

1. "We shipped the new reconcile flow on July 15."
2. "Dispatchers spend 30 minutes less per shift on after-shift reconciliation."
3. "We delivered all 23 user stories in the sprint."
4. "Customer NPS for the dispatcher persona increased by 6 points."
5. "The mobile app was downloaded 5,000 times this quarter."
6. "Reconcile-flow abandonment rate dropped from 18% to 9% in the first 30 days."
7. "We hired 3 engineers."
8. "Time-to-first-value for new dispatchers dropped from 2 weeks to 4 days."

9. "We refactored the auth layer to use SAML."
10. "5 customers cited the reconcile flow as a key reason for renewal."
11. "We held 4 user research sessions this quarter."
12. "Active dispatchers (defined as: completed at least one reconcile in the past 7 days) grew 15% MoM."

Quad protocol

1. **Label all 12** (15 min).
2. **Argue when you disagree** (15 min). At least 2 should produce useful disagreement.
3. **For each "Both"-labeled statement**, rewrite it to be cleanly one or the other (5 min).

Readout (60 sec per quad)

"The trickiest one was [#X] because [why]. The cleanest outcome was [#Y]."

Activity 2 — Build Your Outcome Map

Format: Quad • 40 min • Block 2

Purpose

For the quad's feature, name the outcomes it's meant to produce. Each gets pulled directly from the NS / Tier Sheet / journey map.

The outcome map template

```
## DP Section 1 – Outcome Map

### Primary outcome (the one we're staking the
feature on)
> <user-visible outcome statement>
> Tied to: <NS / KPI from Tier Sheet>
> Target movement: <baseline → target> by <timeline>
> Leading indicator: <what we'd watch first to know
we're on track>

### Supporting outcomes (2–4)
For each:
> <outcome statement>
> Tied to: <Tier Sheet metric>
> Why it matters: <one sentence>

### Counter-outcomes (the guardrails)
> <outcome we DON'T want to produce – if this
happens, we won
> for the wrong reasons>

### What this feature explicitly does NOT outcome on
> <claims we are NOT making – usually pulled from
PRD Section 3 non-goals>
```

Quad protocol

1. **Pull the primary outcome from your NS** (10 min). It should be one of:
 - Movement on a Tier Sheet operational signal
 - Movement on a KPI
 - Movement on the NS itself (rare for a single feature)
2. **List supporting outcomes** (10 min). 2–4 outcomes the feature contributes to without owning.
3. **Name counter-outcomes** (10 min). The "we cheated" guardrails (from NS Defense Card).
4. **Name what we're NOT outcoming on** (5 min). This catches scope creep before it ships.
5. **Sanity check** (5 min). Does each outcome have a Tier Sheet metric attached?

What "good" looks like

- The primary outcome is **not** "the feature is shipped"
 - Supporting outcomes are **fewer than 5** and named in user terms
 - Counter-outcomes prevent gaming
 - The "explicitly NOT" line catches stakeholders who'd otherwise expect more
-

Activity 3 — Agile Values in Trade-offs

Format: Quad • 40 min • Block 3

Purpose

Use the Manifesto values as a decision aid on real trade-offs from the quad's prior weeks' work.

The trade-off scenarios

The quad walks through 4 real trade-offs (3 from prior weeks + 1 new) and applies the Manifesto:

1. **From Week 5:** "Should we hand-write a longer technical spec or get to coding faster?"
 - Manifesto frame: **Working software over comprehensive documentation**
 - But: a TPM still ships a PRD/TCD/TMD/SEP. The Manifesto doesn't say "no docs."
 - Discussion: when does documentation become a substitute for working software?
2. **From Week 6:** "A senior stakeholder asked for a contract change to your scope mid-sprint."
 - Manifesto frame: **Customer collaboration over contract negotiation**
 - But: contracts (incl. PRDs, sign-offs) are how teams stay aligned
 - Discussion: when is the contract serving alignment vs blocking it?
3. **New scenario:** "Mid-quarter, customer behavior data shifts and your top user pain shifts to a different friction. Do you keep building what's planned, or pivot?"

- Manifesto frame: **Responding to change over following a plan**
 - Discussion: how to pivot without thrashing the team
4. **From Week 7 setup:** "An engineer wants to skip the standup but the standup is 'the agile way.'"
- Manifesto frame: **Individuals and interactions over processes and tools**
 - Standups are a tool, not a value
 - Discussion: when is the ceremony serving collaboration vs replacing it?

Quad protocol

1. **For each scenario** (8 min each):
 - State the Manifesto value at play
 - State what the value implies
 - State what the value does *not* imply
 - Decide: what would your quad do?
2. **Final synthesis** (8 min): Which Manifesto value did your quad invoke most? Least? Why?

What "good" looks like

- Each Manifesto value is named **with its non-implication** ("doesn't mean no docs / no plan / no process")
- The quad's decision is grounded in evidence (data, customer signal, team capacity) — not "the Manifesto says so"

Activity 4 — Outcome Map Cross-Review + Wrap

Format: Quad-pair • **45 min** + Wrap • Block 4

Purpose

Cross-review the outcome map with another quad. Surface where outputs are masquerading as outcomes.

Cross-review questions

The reviewer quad reads the outcome map and asks:

1. Is each "outcome" actually an outcome, or is one a dressed-up output?
2. Do the supporting outcomes overlap? (a sign of weak distinction)
3. Is the counter-outcome specific enough to detect a real cheat?
4. What outcome is missing?

Quad protocol

1. **Pair quads** (instructor assigns).
2. **20 min cross-review** with the 4 questions.
3. **15 min author-quad revisions**.
4. **AI sanity check** (10 min):

Role: Senior PM coaching outcome thinking.
Context: <paste the outcome map>
Task: Identify where outputs are masquerading as outcomes,
 where outcomes are too vague to measure, and
any
 counter-outcome that could be gamed.
Constraints:
 - Be specific to the statements given
 - Suggest a concrete rewrite
Format: 3 numbered findings.

Wrap (last 15 min)

Each quad shares:

- Their **primary outcome** read aloud
- **One Manifesto value** they invoked in their map
- **One output that almost masqueraded** as an outcome — caught and fixed

End-of-day checkpoint

Each quad ends Day 1 with:

- ✓ Calibration on output/outcome distinction (12-statement sort)
- ✓ **Outcome map** with primary + supporting + counter-outcomes + explicit not-claims

- ✓ Trade-off thinking grounded in Manifesto values
- ✓ Cross-reviewed
- ✓ AI provenance entry
- ✓ DP Section 1 drafted
