

Day 1 — AI Spec Development · Facilitator Guide

Companion to `labs/day-01-ai-spec-development.md` .
Facilitator-only — do not hand to participants.

Activity 1 — Capstone Subject Confirmation

Cues:

- A subject that fails the "substantive enough" test will produce a thin capstone. Coach to a richer subject if needed.
- A subject lacking real customer signal often produces a fictional PRD. Push for at least one real interview (even a 15-min phone call).
- The subject is fixed (Holocron), so Day 1 is about **scope**, not selection. Press on whether the slice is defensible and shippable in 4 days — and whether they found the governance/compliance driver, not just "editing is slow." The fully-specified reference PRD is the capstone answer key and is held in the private course repo only — it is not published to any mirror.

Activity 3 — Run the 5-Prompt Sequence on FieldPulse

Cues:

- Watch for quads who want to run all 5 prompts in parallel, separately. Force the sequence — each prompt builds on the prior validation.
- The validation step gets skipped under time pressure. Hold the discipline.
- The provenance log is mandatory. If a quad ships an AI Spec without it, they ship fiction.

Facilitator reflection prompts (end of day)

- Which quad's scope line is sharpest? Hold it up Friday — especially a quad that deferred well.
- Did anyone refuse to validate prompt outputs? Coach immediately — AI Spec without validation is fiction.
- Did any quad leave Day 1 with a slice too broad to finish by Friday? Pre-coach tomorrow morning — narrowing on Tuesday is far cheaper than on Thursday.
- Did the practice run on FieldPulse produce a usable AI Spec? Reading skill is the test.
