

Capstone Architecture + AI Spec v1

Week 8 • Day 3 • AI Spec Development & Capstone

TPM Academy

Day 3 Objectives

- Produce **TCD-light** in 40 minutes (Week-4 compressed)
- Produce **TMD-light** in 40 minutes (Week-5 compressed)
- Run the **5-prompt AI Spec sequence** on the capstone
- Cross-triad **spot-check** the AI Spec against sources
- Plan Day-4 validation work

Today's Shape

Clock	Block	Outcome
09:00 – 09:15	Opening	Pin PRD-light + Day-3 plan
09:15 – 10:30	Block 1 + Activity 1	TCD-light
10:45 – 12:00	Block 2 + Activity 2	TMD-light
13:00 – 14:15	Block 3 + Activity 3	5-prompt AI Spec sequence
14:30 – 16:00	Block 4 + Activity 4 + Wrap	Cross-triad spot-check + Day-4 setup

Block 1 — TCD-Light

Week 4 in 40 minutes

TCD-Light (1.5 pages)

```
## 1. Architecture stance – 1 paragraph  
(deploy / failure / scale)  
## 2. Integration map – table (system / owner / sync-async /  
R-W / failure handling)  
## 3. Threat-model summary – 3 STRIDE threats + mitigations  
## 4. SLOs – 1 latency / 1 availability / 1 rate-limit  
(target + defense + verification)  
## 5. Top 3 trade-offs – Option A/B/Choice/Cost/Revisit  
## 6. Stakeholder sign-off – 3-5 stakeholders + status
```

Activity 1 — TCD-Light

Triads • 40 minutes

- 10 min: architecture stance (3-question frame)
- 10 min: integration map
- 10 min: STRIDE summary (3 threats)
- 5 min: 3 SLOs
- 5 min: top trade-offs

10 + 10 + 10 + 5 + 5

Block 2 — TMD-Light

Week 5 in 40 minutes

TMD-Light (1.5 pages)

```
## 1. Data model – 3-5 entities (PK + indexes + relationships)
+ 1 storage trade-off
## 2. Cloud topology – region / managed-vs-self / tenancy /
network / ROM cost
## 3. API contract – 3-5 endpoints (method + path + status +
idempotency)
## 4. Sequence – happy + 1 sad + 1 weird with named invariant
## 5. Performance baseline + monitoring – 3 baselines + 3 alerts
+ 1 leading indicator
```

Activity 2 — TMD-Light

Triads • 40 minutes

- 10 min: data model + 1 trade-off
- 10 min: cloud topology + ROM cost
- 10 min: API contract
- 5 min: sequence (happy + sad + weird with invariant)
- 5 min: baselines + alerts + leading indicator

10 + 10 + 10 + 5 + 5

Block 3 — 5-Prompt AI Spec Sequence

Apply Day-1's pattern to the capstone

The 5 Prompts

#	Job	Inputs
1	Headline + summary	PRD-light §§1–5, TCD-light §1, TMD-light §3
2	Data + API synthesis	TMD-light §1 + §3
3	Sequence + failure	TMD-light §4
4	Constraints	TCD-light §3 + §4 + PRD-light §7
5	Decisions + stakeholders	TCD-light §5 + §6

Validate between every prompt. The chain is what keeps the AI Spec honest.

Validation Discipline (under time pressure)

- Read every output against the source
- Mark: cross-checked / spot-checked / pending / rejected
- Cut hallucinated claims
- **Preserve verbatim:** trade-off costs, revisit triggers, named invariants, customer quotes

Time pressure tempts skipping validation. Hold the line. Catch this in the room.

Activity 3 — AI Spec v1

Triads • 40 minutes

- 8 min × 5 prompts = 40 min total
- Per prompt: paste inputs → capture output → validate → mark

8 × 5 prompts

Block 4 — Cross-Triad Spot-Check + Day-4 Setup

Catch what the author triad missed

Cross-Triad Validation Protocol

1. Pair triads
2. Reviewer triad receives **source artifacts + AI Spec v1**
3. 20 min validation: **5–10 specific claims** from AI Spec checked against source
4. Mark: **wrong / partly right / right**
5. Author triad listens; revises

Watch for rubber-stamping. The reviewer should find at least 1 weak claim.

Activity 4 — Cross-Triad + Day-4 Plan

Triad pairs • 45 minutes • Wrap

- 5 min: pair set-up
- 20 min: validation pass on 5–10 specific claims
- 5 min: author listens
- 15 min: author revises

5 + 20 + 5 + 15 · 15-min wrap

Day 3 Wrap

What we built

- TCD-light (1.5 pages)
- TMD-light (1.5 pages)
- AI Spec v1 (assembled from 5 prompts)
- Cross-triad validation findings

What opens tomorrow

- **Technical logic validation + finalization**
- Catch inconsistencies across the artifact set
- Polish for Friday
- Rehearse the presentation

Bring to Day 4: All 4 documents + cross-triad findings. Tomorrow we make them ship-ready.

Questions & Reflection

Where in your AI Spec do you suspect there's a hallucination you didn't catch?
