

Journey Map Canvas

Day 5 · Activities 1–2 handout (A2 size). A single sheet with five swim lanes for mapping one persona through one journey scope — the factual journey before any debate about fixes. Print at A2 or recreate on a large whiteboard.

Persona: _____ (almost certainly the dispatcher) **Journey scope (pick one):**

- ☐ Pre-shift through end-of-shift (a single workday)
- ☐ First-30-days experience (onboarding-heavy)
- ☐ Mid-shift exception (a tech calls out sick — the canonical disruption)

The five swim lanes

Fill left-to-right, one column per stage (aim for 5–8 stages).

SWIM LANE	WHAT GOES HERE
1. Stage	Phases of the journey, named as user tasks (e.g., Arrive at office → Take the day's dispatch → Reconcile) — not screen names
2. Actions	What the user is <i>doing</i> — concrete verbs
3. Thoughts	What they're thinking — 1–2 quotes per stage, using Week-1 interview language where possible
4. Emotions	Score each stage on a 4-point curve: 😊 → 😐 → 😞 → 😡 (plot it — the curve should not be flat)
5. Touchpoints / friction	Every system or person the user interacts with — your product, paper, phone, other software, manager, customer — and ⭐ the friction

STAGE	[1]	[2]	[3]	[4]	[5]	[6]	...
ACTIONS

EMOTIONS							
TOUCHPOINTS							

Below the swim lanes

Top 5 friction points (ranked by Week-1 pain severity)

1. _____

2.

3.

4.

5.

Top 3 feature concepts (each linked to a friction point + a metric it would move)

1.

2.

3.

What "good" looks like

- The emotions curve is **not flat** — a flat curve usually means the journey has been sanitized. Re-anchor on real interview quotes.
- Friction ★ clusters at **2–3 stages**, not 8. If everything is friction, nothing is.
- Touchpoints include **non-product** systems (paper, phone). These are the input to Week 4's system-components mapping — don't lose them.
