

Capstone-Fit Questions

Day 1 handout. Five questions to confirm your capstone subject survives contact with a 4-day build. Some declared candidates won't. If 1+ answer is "no," refine the subject or pick your backup — better now than Wednesday. Your Week-8 capstone subject is a **real project of your own** (work, school, or hobby) — **not FieldPulse**. FieldPulse is only the Day-1 practice input for learning the technique; the capstone tests whether the muscles transfer to something new.

The 5 capstone-fit questions

1. **Real customer?** Do we have a real customer — interviews, observation, or data — not just a guess?
2. **Substantive enough?** Is the scope substantive enough that compressed PRD work has real substance to work on?
3. **Different enough from FieldPulse?** Is it different enough that we're actually testing transferability of the muscles — not re-running the case study?
4. **Discussable publicly?** Can we discuss it publicly — no NDA or IP issues?
5. **Shippable in 4 days?** Can we ship the full artifact set in 4 days (Day 2–4 build + Day 5 present)?

How to use it

1. **Re-read your declared candidate** (from end of Week 7). What did you commit to?
2. **Walk the 5 questions** honestly as a triad.
3. **Adjust or commit.** If 1+ question is "no," refine the subject or switch to a backup.
4. **List the inputs you'll need** before tomorrow's discovery — customer interviews, data, docs, system access.

Watch-outs

- A subject that fails "**substantive enough**" produces a thin capstone. Pick something richer.
- A subject with no real customer signal produces a *fictional* PRD. Get at least one real interview — even a 15-minute phone call counts.
- A subject too close to FieldPulse (same domain, same persona) doesn't test transferability. Push for variety.

Output

A confirmed capstone subject in one sentence + a list of discovery inputs to gather before Day 2.
