

Integration Checklist + AI-Prose Tell List

Day 4 · Activity 4 handout. Read the whole PRD top-to-bottom, fix incoherences, then lock the version that goes into Friday's review. Coherence fixes first, prose fixes last. Includes the eight-item integration checklist and the AI-generic-prose tell list.

The integration checklist

Check	Pass criterion	✓
Section 1 → Section 2 flow	Reader is motivated to keep reading	
Section 3 goals tied to Section 8 metrics	Each goal references a metric; each metric references a goal	
Section 5 sketch consistent with Section 6 AC	Each happy-path AC corresponds to a step in the sketch	
Section 6 AC vs Section 7 NFRs	NFRs cover what AC don't (system <i>properties</i> vs system <i>behavior</i>)	
Section 7 NFRs reference Section 8 observability	An observability NFR enables every Tier Sheet metric	
Section 4 scope-out feeds Section 11 follow-ups	Items deliberately left out appear in the follow-ups list	
Section 9 risks named, owned, mitigated	No "no risks"	
No AI-generic prose	Consistent triad voice; no fortune-cookie sentences	

The "no AI-generic prose" tell list

Eliminate these on sight:

- "It is important to note that..."
- "By leveraging X, we can unlock Y..."
- "This robust solution will empower stakeholders to..."

- "In today's fast-paced environment..."
- Three adjectives in a row when one would do
- Sentences that sound true but say nothing specific

The test: if a section could appear in *any* PRD for *any* product, rewrite it for **your** product.

Integration protocol (reference)

1. **Solo read-through** — each member reads the whole PRD top-to-bottom, marks issues in the margins.
2. **Pool issues** — de-dupe what each member caught.
3. **Fix in priority order** — coherence first, then specificity, then prose.
4. **Lock the version** — set **Status: In review**, save a copy as "**v0 — for Friday**".

Lock confirmation

- ☐ All eight integration checks pass
- ☐ No AI-generic prose remains
- ☐ Status set to **In review**
- ☐ Copy saved as "**v0 — for Friday**"
