

Day 5 — PRD Review (Morning Reviews, Afternoon Revisions + Secondary)

Activity packet for participant triads. Today's job: subject every PRD to a structured peer review, revise it in response, and submit a final version with a complete review-resolution log. By 16:00 every triad has shipped a reviewed, revised PRD — the mini-capstone deliverable.

Where we are in the week

Days 1–4 produced one **locked v0 PRD per triad** (sections 1–11, status "In review"). Today is the **structured review cycle**. The cadence is intentionally split per the outline: **morning in reviews, afternoon in revisions and secondary reviews**.

Today's cadence (different from Mon–Thu)

Clock	Block	What happens
09:00 – 09:15	Opening; review pairings posted	Instructor explains rubric; pairings revealed
09:15 – 10:45	Primary review round 1	Two reviewing triads on each PRD
10:45 – 11:00	Break	
11:00 – 12:00	Author response + clarifying conversations	Author triads receive feedback in person
12:00 – 13:00	Lunch	
13:00 – 14:30	Revisions	Authors revise based on review
14:30 – 14:45	Break	
14:45 – 15:45	Secondary review	A different reviewer reads the revision
15:45 – 16:00	Wrap + sign-off	Final PRDs + resolution logs delivered

The non-AI rule

Today is still non-AI. Reviews are by hand; revisions are by hand. AI restored Monday Week 4.

The review pairing structure

Each triad's PRD is read by **two different primary-reviewing triads** (for the morning round) and one **different secondary-reviewing triad** (for the afternoon round). The instructor posts pairings at 09:00.

Example for 6 triads (A–F):

PRD author	Primary reviewers (AM)	Secondary reviewer (PM)
A	B, C	D
B	C, D	E
C	D, E	F
D	E, F	A
E	F, A	B
F	A, B	C

Each triad has **3 reading roles** during the day: primary (×2 PRDs in AM), then secondary (×1 PRD in PM). Plus they own their own PRD throughout. Time it carefully.

The Friday review rubric

Every reviewer scores each PRD on:

Dimension	Weight	What "exemplary" looks like
Problem clarity	20%	Engineer could scope without a clarifying call
AC testability	25%	Each AC implementable + falsifiable; covers happy/sad/weird
NFR completeness	20%	5 categories present; each has a defended target
Strategy linkage	15%	Goals tie to Week-2 NS / KPIs / journey friction
Risk honesty	10%	Real risks named; "no risks" is fail
Writing discipline	10%	Clear, specific; no AI-generic prose

Score on 0–4 per dimension (0 = absent, 4 = exemplary). Multiply by weight; sum for total out of 4.0.

A score of **3.0+ ships as-is**. A score of **2.0–2.9 ships with named gaps** (resolution log captures them). Below 2.0 — facilitator intervenes.

Activity 1 — Primary Review (Morning)

Format: Two-triad reviewer team • **90 min total** • Block 1 + Block 2

Purpose

Subject each PRD to two independent rubric-scored reviews. Findings must be specific and actionable — the morning's output is what authors revise from in the afternoon.

Setup

Instructor posts pairings at 09:00. Each reviewing triad needs the rubric, the Review Document template, and a printed copy of the assigned PRD. Reviewing triads do not coordinate.

The reviewer protocol

Each reviewing triad is paired with one PRD. Two reviewing triads independently review the same PRD (no sharing during review).

0–10 min: read Sections 1–5 (Context, Problem, Goals, Scope, Sketch)

- Score Problem clarity and Strategy linkage as you read.
- Mark any **specific** confusion (not "this is unclear" — "I don't understand why dispatchers care about X").

10–35 min: read Sections 6–7 (AC, NFRs)

- Score AC testability — does each AC pass the 5-failure-mode check?
- Score NFR completeness — all 5 categories? Defenses real?
- Mark **specific gaps**: missing weird-path AC, boilerplate NFR, etc.

35–55 min: read Sections 8–11 (Metrics, Risks, Dependencies, Out-of-scope)

- Score Risk honesty.
- Cross-check Section 8 metrics against Section 3 goals (consistency).
- Mark dependencies that don't have named owners.

55–75 min: write the review document

Use the **Review Document template** (below).

75–90 min: refine + submit to author triad

The two reviewing triads do *not* coordinate — the author triad receives **two independent reviews**.

The Review Document template

```
# Review of PRD: <feature name>
**Reviewers:** <reviewer triad> | **PRD authors:** <author triad> |
    **Date:** <today>
```

Scores (0–4 per dimension)

Dimension	Score	One-line rationale
Problem clarity		
AC testability		
NFR completeness		
Strategy linkage		
Risk honesty		
Writing discipline		

```
**Total:** [weighted sum, out of 4.0]
```

Top 3 strengths

1. <specific>
2. <specific>
3. <specific>

Top 5 specific findings (defects, gaps, suggestions)

For each: cite the section / line, name the problem, propose the fix.

1. **Section ____ – <short label>**
 - What we observed:
 - Why it matters:
 - Suggested fix:

(Repeat 5 times)

Open questions for the author triad

> Things we'd ask in the in-person clarifying conversation (Block 2).

What "good" reviewing looks like

- **Specific** beats general. "Section 2 is unclear" is bad; "Section 2 doesn't say *which* dispatchers — small-shop or large-shop — and that changes scope" is good.
- **Cite the section.** Reviewer must point to where in the document the issue lives.
- **Suggest a fix.** A reviewer who only finds problems is half-doing the job.
- **Three strengths is required.** Honest praise builds the trust that lets the harder feedback land.

Deliverable

A completed Review Document per reviewing triad with rubric scores, 3 strengths, 5 specific findings, and open questions for the clarifying conversation.

Activity 2 — Author Response + Clarifying Conversation

Format: Triad-of-three (author + 2 primary reviewers) • **60 min** • Block 3 morning

Purpose

The author triad meets both primary reviewer triads in person. The conversation is **not** about negotiating scores; it's about **clarifying findings** and surfacing implicit feedback that didn't make it into the written review.

Setup

Three triads at one table: author + both AM reviewer triads. Author triad has their PRD plus both Review Documents in hand. Author triad runs the conversation.

The conversation protocol

0–5 min: review summary (each reviewing triad)

Each reviewer triad gives a 2-minute spoken summary of their main findings.

5–25 min: the author triad asks

The author triad runs the conversation. They ask:

- "Finding #3 — can you walk us through what specifically tripped you?"
- "You scored AC testability at 2 — which AC was the worst, and what would you have written instead?"
- "What did you *almost* write down but decided not to?"

25–50 min: the reviewers ask

Reviewers may surface things they didn't write:

- "We assumed X. Was that right?"
- "We disagreed internally about Y. What's your take?"

50–60 min: capture

The author triad closes by **summarizing what they heard**:

- Findings they will adopt → action item per finding
- Findings they will defer → with reasoning (and where it gets tracked)
- Findings they will push back on → with reasoning

This becomes the input to the afternoon revision block.

Deliverable

Author-triad-owned action list categorized as adopt / defer / push back, drawn from both AM Review Documents and the conversation.

Activity 3 — Revisions

Format: Triad • 90 min • Block afternoon 1

Purpose

Revise the PRD based on the morning's reviews and conversations. Update the **review-resolution log**.

Setup

Each author triad needs both AM Review Documents, the adopt/defer/push-back list from the clarifying conversation, and the locked v0 PRD. No AI.

The triad protocol

1. **Sort findings by category** (15 min):
 - Adopt — change the PRD
 - Defer — track elsewhere (issue/ticket/Week-4 backlog)
 - Push back — write the reasoning
2. **Revise in priority order** (60 min):
 - Coherence fixes first (across-section issues)
 - Specificity fixes second (within-section vagueness)
 - Prose fixes last (sentence-level)
3. **Update the resolution log** (15 min):

Friday review-resolution log

****Reviewers (AM):**** Triad B, Triad C
****Total scores:**** B = 3.1 / C = 2.8 → addressed below

Adopted (changes made)

- B/Finding 2: Section 6 AC #4 was untestable. Rewrote with explicit observable.
- C/Finding 1: Section 7 missing Compliance NFR. Added retention + audit-trail NFRs.
- B/Finding 5: Section 9 risk "tech adoption" had no mitigation. Added optional toggle.
- (etc.)

Deferred

- C/Finding 3: Multi-shop manager view scope. DEFERRED to Section 11 follow-up + ticket.

Pushed back

- B/Finding 4: Reviewer suggested splitting AC #2; we declined because the "ands" describe one observable state. Reasoning preserved here.

Status flip

After the revision pass, flip the PRD's status from "In review" to "Revised — secondary pending."

Deliverable

Revised PRD ("Revised — secondary pending") plus an updated review-resolution log naming every finding as adopted, deferred, or pushed back with reasoning.

Activity 4 — Secondary Review

Format: Single-triad reviewer • **60 min** • Block afternoon 2

Purpose

A **different** reviewer reads only the **revised** PRD (not the originals). They look at:

- Did the resolution log line up with the actual changes? (Honesty check)
- Did the revisions introduce new problems?
- Are the deferrals reasonable?
- Final score using the rubric

Setup

Instructor confirms the PM pairings. Each secondary reviewer needs the revised PRD, the resolution log, the AM Review Documents, the rubric, and the Secondary Review Note template.

The secondary reviewer protocol

0–35 min: read the revised PRD + resolution log

Score with the rubric. Compare to the AM scores in the log — has the PRD genuinely improved?

35–50 min: write the Secondary Review Note

```
# Secondary Review of PRD: <feature name>
**Reviewer:** <triad> | **Authors:** <triad>

## Final score: [weighted total]

## What improved (vs. AM scores)
- ...

## What still needs work (gaps in the revision)
- ...

## Verdict
- [ ] Ships as-is (score ≥ 3.0)
- [ ] Ships with named gaps (score 2.0–2.9, gaps captured in resolution log)
- [ ] Needs further revision (score < 2.0; facilitator review)
```

50–60 min: deliver to authors + sign off

The secondary reviewer hands the note to the authors. The authors sign off (or escalate to facilitator).

Deliverable

Secondary Review Note with final rubric score and verdict (ships as-is / ships with named gaps / needs further revision), delivered to authors and signed off.

End-of-day (and end-of-week) checkpoint

Each triad ships:

- ✓ **Final PRD** — Status: "Approved" (or "Approved with gaps")
- ✓ **Resolution log** showing all morning findings handled
- ✓ **Secondary review note** with final score

- ✓ At least 6 reviews authored (2 primary in AM + ≥ 1 secondary in PM)
- ✓ At least 3 reviews received (2 primary + 1 secondary)

This is the **mini-capstone deliverable**. The PRD itself is the artifact; the review trail is the evidence of the process.
