

Day 4 — AI-Augmented Stakeholder Requirement Summaries

Activity packet for participant triads. Today's job: use AI as a **meeting-prep assistant** — to summarize prior context, predict objections, and draft openings — with the AI-validation discipline from Week 5 Day 5 firmly in place. By 16:00, every triad has SEP Section 4 — a meeting-prep packet for tomorrow's Friday simulation.

Where we are in the week

The map exists (Day 1). The plan exists (Day 2). One brief exists (Day 3). Today AI helps prepare for tomorrow's negotiation. The discipline: AI summarizes; the human decides; everything gets logged.

Inputs

- SEP Section 1 (stakeholder map)
- SEP Section 2 (engagement plan + 5 most consequential asks)
- SEP Section 3 (the 1-page brief from yesterday)
- TCD Section 6 (sign-off matrix with statuses)
- All prior artifacts (PRD, TCD, TMD)

What "meeting prep with AI" actually means

A common rookie pattern: dump 50 pages into ChatGPT and say "summarize this for my meeting." Output: confident, generic, invariant-blind.

Better pattern: AI does **specific, structured tasks** under explicit constraints, and every output gets validated.

AI does well	AI does poorly
Re-organize content you provide	Tell you what's been decided
Suggest predictable objections	Predict who in the room you've never met
Draft an opening that you edit	Decide the opening tone
Identify gaps in coverage	Verify facts against current production

The 4 meeting-prep deliverables (today's structure)

For tomorrow's negotiation simulation, each triad produces:

1. Prior-context summary

A short summary of what's already been said about this trade-off / ask:

- Prior decisions made (by whom, when, where documented)
- Open questions that remain
- Tension that surfaced in earlier conversations

2. Objection map

Predicted top 5 objections from the stakeholder, ranked, with:

- The objection (in the stakeholder's likely words)
- The honest response — what's true
- The pivot — where to redirect if pushback continues

3. Opening

The 60-second opening you'd use to start the conversation:

- Why we're meeting
- What's at stake for them
- What you're asking for
- Any acknowledgment of past tension

4. Non-negotiables

The 1–3 things you cannot give up. Knowing these in advance is the defense against folding under pressure.

Activity 1 — Prior-Context Summary (with Validation)

Format: Triad • 35 min • Block 1

Purpose

Use AI to assemble a prior-context summary, then validate it.

The two-prompt approach

Prompt A — Assemble the context

```
Role: Project archivist for a TPM.  
Context: Below is the relevant content from PRD, TCD, TMD, and SEP  
on the topic of <trade-off / ask>.  
<paste relevant excerpts – sections that touch this topic>  
Task: Produce a prior-context summary covering:  
  1. Prior decisions made (with section reference)  
  2. Open questions that remain  
  3. Tension that surfaced (if any) – with section reference  
Constraints:  
  – Use only the provided content; do not extrapolate  
  – Cite specific sections for every claim  
  – If a category has nothing to report, say "none documented"  
Format: 3 numbered sections; bulleted entries with citations.
```

Prompt B — Find the gaps

```
Continuing from above. What's likely to come up in the negotiation  
that the documented context does NOT cover? List 3 gaps the  
stakeholder might raise that we don't have a documented answer to.  
Constraints:  
  – Be specific to the topic and stakeholder  
  – Do not invent stakeholders or scenarios  
Format: 3 gaps, each with: gap / scenario / suggested research.
```

Triad protocol

1. **Identify the topic** (5 min). What's the negotiation about? (Pull from "5 most consequential asks" — Day 2.)
2. **Run Prompt A** (10 min). Generate the prior-context summary.
3. **Validate** (15 min). For each cited section: does it actually say what the AI claims? Same Wk 5 D5 discipline. Mark each: cross-checked / spot-checked / wrong → cut.
4. **Run Prompt B** (5 min). Capture the 3 gaps.

Output

A validated prior-context summary + a gap list. Add to AI-validation log.

Activity 2 — Objection Map

Format: Triad • 40 min • Block 2

Purpose

Predict the top 5 objections the stakeholder will raise, with honest response + pivot.

The objection-map prompt

```
Role: <stakeholder type – e.g., Compliance Lead, Architect>
Context: <paste the 1-page brief from Day 3 + relevant TCD/TMD excerpts>
Task: Read as the named stakeholder. List your top 5 objections to the proposal, ranked by intensity.
Constraints:
  – Be specific to the brief, not generic
  – Voice the stakeholder honestly – not a strawman
  – At least 1 objection should be hostile (the one you'd push hardest)
Format: 5 numbered objections; each one short, in the stakeholder's likely tone.
```

The triad's response template

For each predicted objection:

```
### Objection N: <short name>
**The stakeholder says:** <quoted, in their voice>

**The honest response:** <what's actually true; do not over-promise>

**The pivot (if pushback continues):** <where to redirect – usually to a deeper "why" or to a documented trade-off>

**The line we hold:** <if this objection wins, what's the smallest ground we give up?>
```

Triad protocol

1. **Run the AI prompt** (10 min). Capture 5 objections.
2. **Validate** (10 min). Are these realistic for this stakeholder? Edit; some AI predictions will be wrong tonally or factually.
3. **Write the response template** (15 min). Each objection gets honest response + pivot + line we hold.
4. **Identify the highest-stakes objection** (5 min). Which is most likely to derail tomorrow?

What "good" looks like

- Objections sound **like the stakeholder would actually say them**, not strawmen
- "The honest response" includes what's actually true, not just persuasion

- "The line we hold" is **specific** — not "compromise"
- The highest-stakes objection has a **rehearsed response** by the end of the activity

Activity 3 — The Opening + Non-Negotiables

Format: Triad • 40 min • Block 3

Purpose

Write the 60-second opening for tomorrow's negotiation. Identify the 1–3 non-negotiables.

The opening — 4 essential parts

Opening (target: 60 seconds)

1. **Why we're meeting** (1 sentence)
"I want to walk you through our proposed approach to **<trade-off>** and confirm that you can support it."
2. **What's at stake for them** (1 sentence in their currency)
"This affects **<currency>**: **<one specific thing they care about>**."
3. **What you're asking for** (1 sentence — concrete decision)
"I'm asking for **<approval / specific information / specific action>**."
4. **Acknowledgment of any past tension** (1 sentence; only if needed)
"I know last quarter's **<X>** didn't go the way we planned; I want to be sure we don't repeat that here."

A good opening is **practiced**, not improvised. Triads literally rehearse the opening aloud — twice — before tomorrow.

Non-negotiables

The 1–3 things you cannot give up. Examples:

- "We will not compromise on the audit-trail retention requirement"
- "We will not slip the launch date past July 1; we'll cut scope first"
- "We will not break the SSO scope contract with Identity"

The discipline:

- Each non-negotiable is **specific** (not "quality" or "the user")
- Each has a **fallback** if pushed — what we'd cut to preserve it

- The list is **short**: 3 non-negotiables max

Triad protocol

1. **Draft the opening** (15 min). Use the 4-part template.
2. **Rehearse** (10 min). Read it aloud in the triad twice. Time it. If > 75 seconds, cut.
3. **Identify non-negotiables** (10 min). 1–3 specific items.
4. **Pick fallback for each** (5 min). What scope / time / approach would you give up to protect each non-negotiable?

What "good" looks like

- Opening is **under 75 seconds** when read aloud
- Opening **invites the stakeholder in** (not a lecture)
- Non-negotiables are **specific and few**
- Fallbacks are named — not just "we'd find another way"

Activity 4 — Cross-Review + Mock Meeting

Format: Triad-pair • **45 min** + Wrap • Block 4

Purpose

Pair triads. Each triad runs a 5-minute mock meeting opening with the other triad in role. Surface what works and what doesn't before tomorrow.

The mock-meeting protocol

1. **Pair triads** (instructor assigns; same pair as Day 3).
2. **First triad opens** (5 min). They give their 60-second opening; the reviewer triad asks 1–2 of their predicted objections.
3. **Pause + capture** (5 min). What worked? What threw the author triad?
4. **Switch roles** (5 min for opening).
5. **Pause + capture** (5 min).

After both rounds (25 min)

Each triad updates their Section 4 with:

- The opening tweak that came from rehearsal
- The objection that was harder than expected
- A "I wish I'd said" — the line that came after, not in the moment

AI cross-check (10 min)

Role: Negotiation coach reviewing a meeting-prep packet.
Context: <paste the Section 4 packet – opening, objection map, non-negotiables>
Task: Identify 3 gaps in the prep:
1. An objection probably under-prepared
2. A non-negotiable that's actually negotiable (or absent)
3. A part of the opening likely to sound rehearsed in a bad way
Constraints:
– Be specific
– Suggest a concrete fix
Format: 3 numbered findings.

Wrap (last 15 min)

Each triad shares:

- Their **non-negotiable** that they're most worried about defending
- The **opening sentence** they're proudest of
- The **objection** they want to rehearse one more time before tomorrow

End-of-day checkpoint

Each triad ends Day 4 with:

- ✓ Prior-context summary (validated)
- ✓ **5-objection map** with response + pivot + line-we-hold
- ✓ **Opening** under 75 seconds, rehearsed
- ✓ **1–3 non-negotiables** with fallbacks
- ✓ Mock-meeting feedback captured
- ✓ AI provenance log entry (continuing the cumulative log from Wk 5 D5)
- ✓ SEP Section 4 drafted
