

Artifact Templates — Master Index

Day 5 handout. Your take-home template pack. Every artifact template the academy taught, one line of purpose each, and the week it came from — so you can pull the right one in your next role without re-deriving it. The Week-8 "-light" variants are the compressed versions you produced under the 4-day capstone clock.

Discovery + product definition

Template	Purpose	From
Persona (validation canvas)	Name the role, job-to-be-done, and specific friction — grounded in real signal	Week 1
Problem statement	One scoped problem an engineer can scope from without a clarifying call	Week 1
Pain-point severity matrix	Rank pains on Severity × Frequency × Addressability	Week 1
Evidence brief	Tag every claim by tier: Observed > Reported > Inferred > AI-generated	Week 1

Metrics + outcomes

Template	Purpose	From
North Star + defense card	Name the one metric that captures value, and defend it against gaming	Week 2
Journey map	Map the customer's flow to surface friction and moments that matter	Week 2
Outcome map	Primary + supporting + counter-outcome, tied to user-visible value	Week 7

Requirements

Template	Purpose	From
PRD	Full product requirements: context, problem, goals, scope, solution, ACs, NFRs	Week 3
Acceptance Criteria (Given/When/Then)	Testable happy / sad / weird-path criteria	Week 3
NFR template (requirement / defense / verification)	One non-functional requirement per category, each defended and verifiable	Week 3
PRD-light	2-page compressed PRD, Sections 1–7	Week 8

Architecture (TCD)

Template	Purpose	From
Architecture stance (deploy/failure/scale frame)	Defend mono / micro / hybrid in business terms	Week 4
STRIDE threat model	Surface top threats per data-flow and name mitigations	Week 4
SLO template (target / defense / verification)	Latency / availability / rate-limit targets tied to user behavior	Week 4
Trade-off (Option A/B / Choice / Cost / Revisit)	Make and record a defensible decision with a revisit trigger	Week 4
TCD-light	1.5-page compressed Technical Concept Document	Week 8

Modeling (TMD)

Template	Purpose	From
Data model (access-pattern-first)	Entities, keys, indexes, relationships driven by how data is read/written	Week 5
Cloud topology	Region / managed-vs-self / tenancy / network boundary + ROM cost	Week 5
API contract	Endpoints with method / path / status codes / idempotency	Week 5
Sequence (happy / sad / weird + named invariant)	Model the flow and the invariant that must hold under failure	Week 5
Performance baseline + monitoring	Baselines, alerts, and one leading indicator	Week 5
AI validation log	Track every AI-assisted claim and its validation status	Week 5
TMD-light	1.5-page compressed Technical Modeling Document	Week 8

Stakeholders (SEP)

Template	Purpose	From
Stakeholder map (Power × Interest + RACI)	Place stakeholders and assign roles for a consequential decision	Week 6
Trade-off brief	Communicate a trade-off in the stakeholder's currency, not technical terms	Week 6
Negotiation prep	Anticipate the top objection and plan agreement / deferral / escalation	Week 6
SEP-light	1-page compressed Stakeholder Engagement Plan	Week 8

Delivery (DP)

Template	Purpose	From
Backlog skeleton (Epic / Feature / Stories)	Turn priorities into an actionable, hierarchical backlog	Week 7
Tracking plan	Leading indicators + a review cadence	Week 7
Value stream map	Identify queues and the bottleneck to remove	Week 7
Bottleneck removal experiment	Hypothesis / test / measurable success criterion	Week 7
DP-light	1-page compressed Delivery Plan	Week 8

Integration + synthesis

Template	Purpose	From
AI Spec (8 sections)	Engineering-ready synthesis of PRD/TCD/TMD/SEP/DP, with a provenance log	Week 8
AI Spec 5-prompt sequence	The validated prompt chain that drafts the AI Spec	Week 8
7-point technical logic validation	Walk every cross-artifact reference to prove the set is internally consistent	Week 8

The compressed "-light" variants are for time-boxed work. In your next role, use the full Week 1–7 templates when the stakes and timeline allow; reach for the -light versions when you need rigor fast.
