

Day 5 — Data-Driven Problem Framing · Facilitator Guide

Companion to `labs/day-05-problem-framing.md` . Facilitator-only — do not hand to participants.
Cues, answer keys, timings, reflections.

Activity 1 — Draft Your Statement

Cues:

- The "Success looks like" line is the most-skipped. Walk the room and refuse to let it stay empty.
- If a triad has two candidate statements after the parallel draft, ask which one the engineer would prefer to scope from. That usually picks the winner.

Activity 2 — Pressure Test

Cues:

- If a triad has AI rewrite the statement, ask them to point at the line they wrote. Re-anchor ownership.
- A long Open questions list is a feature, not a bug. Honor the triads that grew their list honestly.

Activity 3 — Paired Dry-Run

Cues:

- The "what I heard" sentence is the single most diagnostic moment. Slow it down — don't let the listener gloss it.
- If both directions run long, cut the joint debrief to 10 minutes rather than skipping the second readout.

Week 1 Cohort Readouts

Facilitator timing:

- 6 triads = ~80 min readouts + 18 min between = **~98 min**. Budget 90 min and stay disciplined.
- Random draw order (pull triad names from a hat or randomizer).
- If running short, compress Q&A to 2 minutes — never the readout itself.

Facilitator debrief (end of Friday, instructor only)

Before you log off:

1. Which triads seem **PRD-ready** for Week 3? Which need extra coaching during Week 2?
2. Who was over-relying on AI by the end of the week vs. using it judiciously?
3. Which triad surprised you — in either direction — and why?

4. Three adjustments for Week 2 pacing based on what you saw today.
