

Day 1 — Operational Signals & KPIs · Facilitator Guide

Companion to `labs/day-01-metrics-kpis.md`. Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Activity 1 — "Metric or Vanity?"

Cues:

- If a triad picks "session length" as a bet — ask whether longer sessions are good for a dispatcher who hates being on the app.
- If a triad picks "tickets closed per agent" — ask what happens when an agent closes tickets without solving them.
- These are the productive arguments. Hold space.

Activity 2 — Operational signal sprint

Cues:

- Most triads will under-mark instrumentation gaps. Push them: "Could you query this in production right now?"
- Signals that say "satisfaction" or "engagement" without a specific measure are warning signs. Coach for concreteness.

Activity 3 — KPI laddering

Cues:

- Signals that ladder to nothing are worth flagging as either novel or noisy. Help the triad decide which.
- Push back on KPIs that are operational signals in disguise (anything that moves daily and a squad acts on).

Activity 4 — Tier Sheet defense + North Star placeholder

Cues:

- Pin the Metrics Tier Sheets on a shared wall. They will be referenced every day this week.
- Watch for placeholder NSs that are basically restated KPIs — that's the muscle Day 2 will work, so don't fix it today, but flag the triad to coach Monday.

Facilitator reflection prompts (end of day)

- Did any triad lock in a vanity metric without surfacing it as one? What language would I introduce earlier tomorrow?

- Which triad has the weakest causal chain? They are the one to coach in tomorrow's Activity 1.
- Did anyone propose a metric that is easy to measure but irrelevant? That's the most common silent failure mode — name it openly tomorrow.
