

Day 1 — AI Fundamentals & Prompting for TPMs · Facilitator Guide

Companion to `labs/day-01-ai-fundamentals.md`. Facilitator-only — do not hand to participants. Cues, answer keys, timings, reflections.

Pre-flight

- Print or digitally share the ambient-context handouts before Day 1 morning break: one-page product overview, three dispatcher interview transcripts, the 14-ticket pack, the screen-time analytics export, and the composite prior-PR customer quote.
- This packet is the single source of truth for the day's small-group work — you drive from it.

Triad formation

- Triads persist through the end of Week 3 (they carry the mini-capstone). Make the formation stick — don't let it drift after Day 1.

Activity 1 — "Same Question, Three Models"

Cues:

- If all three tools agreed, ask "did they agree *correctly*? How do you know?" — surfaces the comfortable-but-wrong trap.
- If a tool fabricated a citation, celebrate it as a finding. Take a screenshot for the week's reference.

Activity 2 — Rewrite This Prompt

Cues:

- Walk the room while triads rewrite. The most common gap is under-specified Constraints — coach by asking, not telling.
- If a triad's rewrite still gets a vague output, that's a teaching moment for the cohort: weak prompts can survive one improvement and still fail.

Activity 3 — The Three Hats

Cues:

- Watch for "the AI was nice to us" outputs — push the triad to re-prompt with sharper persona constraints.
- The discomfort is the point. If all three hats produce comfortable questions, the prompting is too soft.

Activity 4 — Prompt Pattern Library (Publish)

Cues:

- Post all triad libraries to a shared space by end of Day 1. Every triad should be able to borrow another's prompts starting Day 2.
- Triads that finish early often have shallow entries. Push them: "What's the smallest change that would break this prompt?"

End-of-day reflection prompts

- Did any triad over-rely on AI without critique? What would I model differently tomorrow?
- Which failure mode (hallucination, starvation, sycophancy, anchoring) did the room most struggle to see?
- Who in the room was quieter than I'd like? How can I engineer tomorrow's triad interactions to pull them in?
