

Feature Card Template

Day 5 · Activity 3 handout. Translate your highest-friction journey stages into three feature concepts that pass the strategy test. Brainstorm 8, test each, cull to 3.

The strategy test

A feature concept earns a place on your map only if it passes all three:

- ☐ **Friction link** — names the specific stage and friction it would reduce
- ☐ **Metric link** — names the operational signal or KPI it would move
- ☐ **Principle link** — aligns with at least one of your 3 design principles (or names which it deliberately trades off)

Most candidates will fail one. That's the point of testing before culling.

The card (fill one per surviving feature, three total)

Feature concept: <short name>

Stage(s) addressed: <journey stages>

Friction reduced: <specific friction starred on the map>

Metric it moves: <op-signal or KPI from your Tier Sheet>

Aligned principle: <which of the 3 from Day 3>

Trade-off / risk: <what we'd give up; what could go wrong>

Validation: how would we know it actually moved the metric in 30 days?

Guardrails

- A feature with **no metric link** is the most common error. Force the link.
- If all three features address the **same stage**, ask whether that stage is really 80% of the friction.
- The **Trade-off / risk** box is non-negotiable. "No downside" is a failed answer.
