

Vanity-Metric Card Pack

Day 1 · Activity 1 handout. Twelve metrics drawn from FieldPulse-adjacent SaaS products. Sort them, then bet on two and refuse to report two — the argument is the point.

Cut these into cards, or work them as a list. For each card, place it on the 2x2, then pick the two you would **bet on** for FieldPulse and the two you would **never report up**. One-sentence rationale per pick.

The 2x2

The cards

#	Metric
1	Daily Active Users
2	Number of features shipped per quarter
3	Average session length
4	% of dispatchers who completed onboarding
5	Support tickets closed per agent per day
6	Mean time to first dispatch after login
7	Reconcile-flow completion rate
8	New trial sign-ups per week
9	Push notifications sent per day
10	Average dispatcher rating in the app store
11	Median time to close out an end-of-day reconcile
12	% of jobs closed same-day (worked and fully reconciled)

Deliverable

A sorted 2x2 with your **bet-on** and **never-report-up** cards labeled, plus one sentence of rationale per pick, rooted in the causal chain:

"We would bet on **[X]** and **[Y]** because [reason]. We would never report up **[A]** or **[B]** because [reason]."
