

Security Brief Template

Day 2 · Activity 4 handout. The one-page document you'd hand a security partner *before* the meeting. Short enough to read in 5 minutes. It shows you made a starting point and want validation — you're not outsourcing the thinking.

```
# Security brief – <feature>

## Summary (3 bullets)
- ...
- ...
- ...

## Data flow (link to TCD Section 2)
[Reference the Context/Container diagrams and the data-flow sketch]

## Top 5 threats (from STRIDE pass)
1. ...
2. ...
3. ...
4. ...
5. ...

## Open questions for security team
- ... (specific: scopes, controls, precedents – not "tell us about security")
- ...
- ...

## Decisions we've already made (and their justification)
- ... (the starting point we want validated)
- ...
```

Prep alongside the brief

5 questions to ask the security team (be specific):

- "Does our SSO scope model fit the existing IAM patterns?"
- "Where is the line between 'we mitigate' and 'platform mitigates'?"
- "What's the precedent for this data classification?"

-

-

3 likely pushbacks from security (plan a response for each):

Predicted pushback	Planned response

What "good" looks like

- The brief is **short** — a security partner can read it in 5 minutes.
- The "open questions" list is **specific**, not "tell us about security."
- The "decisions already made" section shows you made a starting point and want validation, not that you're outsourcing thinking.

"Tell us about security" is a question that surrenders the conversation. Ask about specific scopes, controls, and precedents.
