

Day 3 — Capstone Architecture + AI Spec

Drafted · Facilitator Guide

Companion to `labs/day-03-capstone-architecture-ai-spec.md`. Facilitator-only — do not hand to participants.

Activity 1 — TCD-light

Cues:

- If a triad goes deeper than 1.5 pages, force a cut. Compression is the discipline.
- If the architecture stance reads "we'll figure it out," push: "what's the starting position?"

Activity 2 — TMD-light

Cues:

- Watch for triads who skip the named invariant on the weird path. It's the senior signal.
- If a triad puts implementation in Section 3 (e.g., "use Redis"), redirect to behavior, not implementation.

Activity 3 — Run the 5-Prompt AI Spec Sequence

Cues:

- Time pressure will tempt triads to skip validation. Hold the line. Catch this in the room.
- If a triad's AI Spec contradicts a source artifact, the validation step failed. Walk it through to find where.

Facilitator reflection prompts (end of day)

- Which triad's AI Spec is most engineering-ready? Hold up Friday.
- Did anyone produce a 5-page TCD-light? Coach to cut.
- Did the cross-triad validation catch real claims, or was it a rubber stamp?

- Did the validation step survive time pressure? If not, intervene tomorrow.
