

DP-Light Template (1 page)

Day 4 handout. The compressed Delivery Plan — Week-7 work in ~20 minutes. Outcome map + backlog skeleton + tracking plan + value stream + one bottleneck experiment. The primary outcome must be **user-visible**; leading indicators must be **measurable within 7 days**.

DP-light – <feature>

1. Outcome map (compressed)

Primary outcome + 2 supporting outcomes + 1 counter-outcome.

2. Backlog skeleton

1 Epic + 1 Feature + 5 User Stories (top-priority subset of PRD-light Section 6).

3. Tracking plan (compressed)

3 leading indicators. 1 monthly review cadence.

4. Value stream (compressed)

Top 3 queues identified.

5. 1 Bottleneck removal experiment

Hypothesis / test / success criterion for one queue.

Build order (20 min)

1. **5 min** — outcome map (primary + 2 supporting + 1 counter).
2. **5 min** — backlog skeleton.
3. **5 min** — 3 leading indicators.
4. **5 min** — 1 bottleneck experiment.

What "good" looks like

- The primary outcome is **user-visible**, not an internal output.
- The 5 user stories are the **top-priority subset** of PRD-light Section 6, not a re-listing.
- Leading indicators are **measurable within 7 days**.

- The bottleneck experiment has a **measurable success criterion** — hypothesis, test, and what "worked" looks like.
