

PRD-Light Template (2 pages)

Day 2 handout. The compressed PRD — Week-3 rigor in a fraction of the space. Compression is **selective, not lower-quality**: keep what's load-bearing, cut what's cosmetic. Every word earns its place. Target: 2 pages total, Sections 1–7.

The compressed PRD covers

Section	Section	Budget
1	Context	½ page
2	Problem	½ page
3	Goals + non-goals	½ page
4	Scope (in / out table)	—
5	Solution sketch	½ page
6	Top 6–8 Acceptance Criteria	—
7	Top 5 NFRs (one per category)	—

Compressed persona (feeds Sections 1–2)

Name the persona before you draft. A compressed persona has 3 fields:

```
**Persona:** <role + segment>
**Job-to-be-done:** <verb-based, in their language>
**Why it's hard today:** <specific friction; quote a real customer if possible>
```

Example: **Persona:** New B2B finance ops associate at a 200-person company. **Job-to-be-done:** Close the books each month without staying late on Friday. **Why it's hard today:** "I spend Thursday night chasing 4 different teams for missing accruals — by the time they respond, I've forgotten what I asked."

Rank your top 3 pains on **Severity x Frequency x Addressability**. The pain that survives all three goes in the PRD.

The PRD-light structure

PRD-light – <feature>

1. Context (½ page)

Strategic anchor + at least one customer quote or data point.

2. Problem (½ page)

The persona's specific friction.

3. Goals + non-goals (½ page)

3 goals (user outcomes, not feature names) + 2–3 non-goals.

4. Scope

In Out
---- -----

Cut aggressively to fit the 4-day window; scope-out should be rich.

5. Solution sketch (½ page)

User-visible flow + key surfaces + hard interactions.

Does NOT specify implementation. Passes the "engineer's first three questions" test.

6. Acceptance Criteria (6–8 total)

– 3 happy-path ACs

– 2 sad-path ACs

– 1 weird-path AC

Given / When / Then form. Compressed = fewer ACs, not weaker ACs.

7. NFRs (top 5 – one per category)

– 1 Performance (latency target with defense)

– 1 Security (auth/authz approach)

– 1 Accessibility (the WCAG floor)

– 1 Observability (leading indicator from your outcome map)

– 1 Compliance (the regime that applies)

Each uses the Wk-3 template: requirement / defense / verification.

What "good" looks like

- Section 1 fits ½ page and references at least one real customer quote or data point.
- Goals are **outcomes**, not features.
- Non-goals catch the most-likely scope creep.
- Section 5 does not specify implementation.

- Section 6 has happy / sad / weird coverage.
- Section 7 has all 5 categories represented.
- The whole document fits **2 pages**.
